Monday 11 November 2013

**VENUE**

L’OSTERIA (Italian) Restaurant  
616 Nicholson St, Fitzroy North VIC 3068 (Cnr Reid St)

**PROGRAM**

**Advances in Scleral Lens Design – Paragon Normal Eyes 15.5 - By Ken Kopp**

Large diameter GP lenses have exploded in the marketplace for all types of corneal anomalies. These lens designs completely vault the cornea and limbus which allows for excellent comfort and visual acuity. The NormalEyes 15.5 design can be useful for all cornea types and most conditions...from the flatter post-surgical corneas to the steepest keratoconus corneas. The lecture will detail how the initial diagnostic lens is calculated and what to observe once the lens is on the eye. Adjustments to control limbal and corneal vault will be offered to secure final lens success.

This lecture will recognize the need for a large diameter lens design but feature the Paragon NormalEyes 15.5 design. Paragon Vision Sciences is a world leader in the manufacture of gas permeable contact lens materials. The CRT and NormalEyes products feature the HDS100 material which is approved for 7 days continuous wear. The difference being that the CRT lens is only worn overnight whereas the NormalEyes 15.5 lens is only worn during the waking hours. The unique features of the NormalEyes 15.5 are:

- Convex-to-eye edge configuration for "soft conjunctival landing"
- Overall thin lens profile
- Dual Axis landing zone for exceptional stability
- Proximity Control Technology to allow exact sagittal control
- Laser marking for parameter verification

**ABOUT OUR SPEAKER**

Ken Kopp has been in the Eye Care field for over 35 years. He began as a licensed Optician in upstate New York and was the sole contact lens practitioner for a highly successful multi-location Optical business for ten years. Since then he entered the wholesale side of the contact lens industry and has held managerial positions with national and international manufacturers. His organizational experience has been as an associate board member of the New York State Contact lens Society, attained Fellow status in the Contact Lens Society of America in 1992, and was an advisory committee member of the Ophthalmic Dispensing Department at Hillsborough Community College in Tampa, FL. He was selected to assist in the Item Writing Session for the NCLE Advanced Examination and has been published in the CLSA EyeWitness periodical. Ken has lectured on the clinical aspects, modality differences, and modern manufacturing of all types of contact lenses. He has held the position of Manager of Clinical and Professional Services at Paragon Vision Sciences in Mesa, AZ, for over ten years and is responsible for all practitioner training for Paragon products.
